

8 FACTS TO KNOW ABOUT VENTING TANKLESS WATER HEATERS

1

Direct venting

Gas tankless water heaters don't have to use indoor air for combustion.

2

Concentric venting

You don't always need two ventilation pipes, even for direct-vent units.

3

Side wall venting

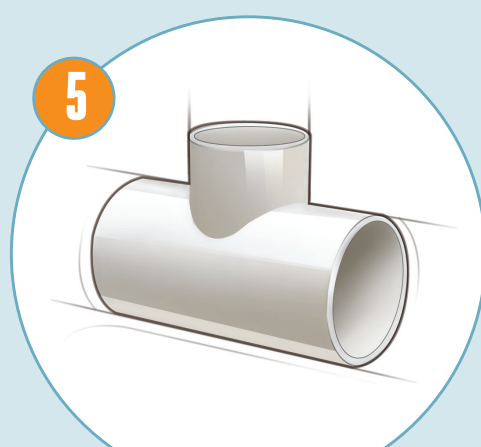

You don't have to vent through the roof.

4

Outdoor installation

With an outdoor unit, you don't need to vent at all.

5

PVC venting

With a condensing tankless water heater, you don't need metal venting.

6

Recessed installation

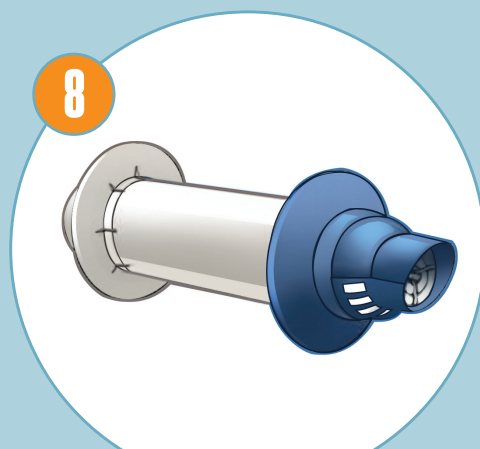

You don't have to have a box stuck to your wall.

7

Common venting

You don't always need separate vents for multiple water heaters.

8

Attractive terminations

Your venting system doesn't have to be ugly.
